- Html
- Css
- JavaScript
- Python
- Java
- Bootstrap
- SQL
- Git hub
- Microsoft Excel, PowerPoint, Word
- Quick learner

Projects

Hospital Management System (June 2023-Nov 2023)

The Hospital Management System project features three key modules: Admin, Doctor, and Patient. This system streamlines healthcare operations by enabling patients to book appointments and manage them digitally through a secure database. Patients can easily schedule appointments, view available slots, and receive confirmation notifications. Doctors can access their schedules, review patient records, and provide efficient care. The Admin module oversees the system's overall functionality, manages user access, and maintains the database. This integrated approach enhances the patient experience, optimizes appointment management, and ensures accurate medical records, ultimately improving the efficiency and quality of healthcare services.
